

Command list:

1. **I (Identify)**: Triggers the ESP32 to send back a device identification string ("ESP32").
2. **T (Threshold & Filters)**: A compound command used to update image processing parameters. It can take multiple values in a single string:
3. **T[Value]**: Sets the **threshold_value**.
4. **L[Value]**: Sets the **blur_value**
5. **M[Value]**: Sets the **min_area_value**
6. **A (Display On)**: Sets **display_enabled** to 1 and returns "DISPLAY:ON".
7. **B (Display Off)**: Sets **display_enabled** to 0 and returns "DISPLAY:OFF".
8. **R (Reset)**: Reverts all filter values (**threshold**, **blur**, **min_area**) to their default hardcoded settings.
9. **S (Status)**: Requests a summary string of all current global variable states.
